

2019

Health Physics Society 52nd Midyear Meeting

17-20 February 2019 · San Diego, California
Sheraton San Diego Hotel & Marina

FINAL PROGRAM

CHP

CONSULTANTS DOSIMETRY

Celebrating 16 years of Health Physics
Instrumentation, Consulting, and
Radiation Dosimetry Services

Counts.Pro converts your existing meter inventory to digital wireless GPS enabled dataloggers to capture and easily share your survey data.

Refurbished Radiological Instruments at half price or less,
fully warranted. If it's in stock, you save big!

Portal and Tool Monitors
Automatic sample counters
Air Samplers, Lab Equipment

Huge inventory of hand-held
meters and probes.

Our Senior Consulting Team can help you
with your projects large or small. Extensive
experience in App design, D&D, Instrument
Development, Etc.

CHP DOSIMETRY provides a full suite of radiation dosimetry
products including traditional TLD and the new Instadose and
Instadose Plus products.

We work with large and small companies and accommodate
project specific dosimetry on a regular basis. CHP has an order of
magnitude more customer service than other dosimetry companies
to accommodate your needs.

HPS COMMITTEE MEETINGS

All Committee Meetings are in the Sheraton San Diego Hotel & Marina

Saturday 16 February 2019

NRRT Board and Panel

9:00 am – 4:00 pm Marina 6

Finance and Executive Committee Meeting and Lunch

12:00 pm – 5:00 pm Room 514

Board Reception

6:00 pm – 7:30 pm President's Suite

Speaker Ready Room

Marina 5

Sunday 3:00 PM – 5:00 PM

Monday 8:00 AM – 5:00 PM

Tuesday 8:00 AM – 5:00 PM

Wednesday 8:00 AM – 10:00 AM

Sunday 17 February 2019

HPS Board Meeting

8:00 am – 5:00 pm Marina 4

AAHP Executive Committee

8:00 am – 5:00 pm Room 415

NRRT Board and Panel

9:00 am – 4:00 pm Marina 6

Program Committee Meeting

10:00 am – 12:00 pm Maritime Boardroom

Monday 18 February 2019

NRRT Board and Panel

9:00 am – 4:00 pm Marina 6

Scientific and Public Issues Committee

2:00 pm – 3:30 pm Room 511

Tuesday 19 February 2019

Ludlum's calibration concepts (hands-on) with an overview of the new digital line

(open to registered HPS attendees)

8:30 am – 5:30 pm Spinnaker

NRRT Board and Panel

9:00 am – 4:00 pm Marina 6

NCRP PAC-2 Meeting

1:00 pm – 2:00 pm Room 511

PRS Business Meeting

1:00 pm – 2:00 pm Room 514

Wednesday 20 February 2019

Program Committee Lunch

12:00 pm – 1:00 pm Room 518

IRPA Medical Radiation Safety Culture Workshop

1:30 pm – 5:00 pm Spinnaker

Thursday 21 February 2019

IRPA Medical Radiation Safety Culture Workshop

8:30 am – 4:30 pm Harbor's Edge Restaurant

Could your organization benefit from reliance on experienced radiation safety professionals?

Explore new consulting support services to optimize your education, compliance and ongoing radiation safety needs. Visit our friendly team at booth #409 to learn more.

Regulatory safety support services

LANDAUER has the unique expertise to support regulatory and dosimetry management compliance:

- Offers a full staff of Certified Health Physicists and highly qualified experts in diagnostic imaging and nuclear medicine
- Has access to up-to-date state regulations with the expertise of having national oversight from organizations around the country
- For RSO assistance can provide quarterly radiation safety committee summaries provide electronic signoff and even communicate with agencies on behalf of your organization

Real-time dose measurement system

See your radiation exposure instantly with RaySafe i3, a real-time dose measurement system that can help build a better Radiation Safety Culture.

Benefits include:

- Real-time dosimeter: this easy to wear, minimal maintenance dosimeter measures and records radiation every second
- User friendly software: manage multiple dosimeters and retrieve dose information from multiple real-time displays
- Real-time display: dose data is shown individually for connected dosimeters in real-time with easy-to-read bar graphs
- Instant feedback: empowers medical staff to learn and adapt behavior to minimize unnecessary radiation exposure

Visit landauer.com or raysafe.com to learn more about our products and services.

SOCIAL EVENTS

All Social Events are in the
Sheraton San Diego Hotel & Marina

Sunday 17 February 2019

Welcome Reception

6:00 PM – 7:30 PM Harbor Island 3
Plan on attending the HPS Welcome Reception. This is an opportunity to meet friends and start your evening in San Diego. Cash bar and light refreshments will be available during the reception.

Monday 18 February 2019

Complimentary Lunch in Exhibit Hall

Noon – 1:15 PM Grande Ballroom

Poster Session

5:00 PM – 6:30 PM Grande Ballroom

Exhibitor Reception

5:00 PM – 6:30 PM Grande Ballroom
Join the exhibitors for food, a cash bar, and the latest in health physics equipment.

Tuesday 19 February 2019

Complimentary Lunch in Exhibit Hall

Noon – 1:15 PM Grande Ballroom

2019 Annual Meeting Orlando, Florida

www.hps.org/meetings

Join us for the HPS 2019 Annual Meeting in Orlando, Florida!

Booth: 101

Bionomics

PO Box 817

Kingston, TN 37763

865-220-8501

www.bionomics-inc.com

Bionomics Inc. is the leading service provider to generators of low level radioactive waste and mixed waste. With 30+ years in business, we have the proven experience and knowledge to reduce client risks. We disposition common and specialty waste streams, with scheduled pickups to meet the needs of our clients. We use our own trained and qualified brokers and technicians to provide specialty supplies, make pickups, track waste, and arrange for final processing and disposal at only the top-tier facilities. We provide disposal certificates for all shipments. We also perform specialty projects, such as decontamination, decommissioning, lab cleanouts, surveys, and disposal of legacy wastes.

Booth: 301

Gold Sponsor

Chase Environmental Group, Inc.

11450 Watterson Ct.

Louisville, KY 40299

502-267-1455

www.chaseenv.com

Chase Environmental's Radiological Services Group is dedicated to servicing smaller quantity generators of low level and mixed radioactive waste – as well as providing remediation and license termination needs of a wide range of clients. Additionally – we provide a dedicated consulting service for industrial type clients who either use radioactive materials in their process – or who wish to prevent the introduction of radioactive materials to their processes. We go to great lengths to ensure quality, compliance, safety and value at every point in the process – while providing a great customer service experience. For more information – or to request a quote for services please contact John O'Neil at 877-389-2124 or joneil@chaseenv.com.

Booth: 500

CHP Consultants/ CHP Dosimetry

305 Cumberland View Road

Clinton, TN 37716

888-766-4833

www.chpconsultants.com

CHP Consultants provides half price radiological instruments and creative solutions. We are introducing the Counts.Pro™ device to revolutionize the collection of survey and laboratory data. Counts.Pro™ turns count rate meters into mobile laboratories that instantly update to secure cloud storage. CHP Dosimetry provides NVLAP-accredited TLD badge service with great service.

Booth: 202

Eckert & Ziegler Isotope Products

1380 Seaboard Industrial Blvd.

Atlanta, GA 30318

404-352-8677

www.ezag.com

Eckert & Ziegler Isotope Products provides high-quality, NIST traceable radioactive calibration sources, solutions, and gases. We operate three ISO 17025:2005 DAKKS accredited calibration laboratories, two in the USA and one in Germany. We are a radiochemical sample Proficiency Testing Provider, accredited to the ISO 17043:2010 standard by the ANSI-ASQ National Accreditation Board.

Booth: 205

Fuji Electric Co., Ltd

1 Fuji-machi

Hino-shi, Tokyo 191-8502 Japan

+81-42-585-6024

www.fujielectric.com/products/radiation

Fuji Electric has a sophisticated line-up of high quality Radiation Detection instrumentation, including new electronic personal dosimeters and ultra-lightweight neutron survey meter. Fuji Electric radiation instrumentation has been used widely in nuclear, industrial, and medical facilities. For over 60 years, we have been committed to maintaining the safety of personnel and safeguarding the public and environment.

Booth: 400

Hi-Q Environmental Products Co.

7386 Trade Street
San Diego, CA 92121
858-549-2820
www.HI-Q.net

Booth: 300**Gold Sponsor**

HI-Q Environmental Products Company is an ISO 9001:2015 Certified designer/manufacture that has been providing air sampling & monitoring equipment, systems and services to the nuclear and environmental monitoring industries since 1973. Our product line ranges from complete stack sampling systems to complex ambient air sampling stations. Our product catalog includes: Continuous duty high & low volume air samplers, radiation measurement instrumentation, radiation monitoring systems, air flow calibrators, radioiodine sampling cartridges, collection filter paper and both paper-only or combination style filter holders. Along with the ability to design complete, turn-key, stack and fume hood sampling system, HI-Q has the unique capability to test ducts and vent stacks as required by ANSI N13.1-1999/2011.

HPS Journal/Newsletter

www.hps.org

Booth: 303

J.L. Shepherd & Associates

1010 Arroyo St.
San Fernando, CA 91340
818-898-2361
www.jlshepherd.com

Booth: 306**Bronze Sponsor**

J.L. Shepherd & Associates products include Cs-137 and Co-60 sources, biological research, blood component, space effects testing, sterilization and process irradiators. Gammacell 220 Co-60 reloads and uploads. Gamma, beta and neutron instrument calibration and dosimeter irradiation facilities. Irradiator/calibrator security upgrades, service, repair, relocation and decommissioning for current and extinct manufacturers. Hot cell windows and leaded glass.

LabLogic Systems, Inc

1911 N US Highway 301
Suite 140
Tampa, FL 33619
813-626-6848
www.lablogic.com

Booth: 201

LabLogic specializes in instrumentation and software dedicated to the measurement and analysis of radioisotopes used in environmental, pharmaceutical, nuclear medicine and research laboratories. Our products include liquid scintillation counters, radiation monitors, personal dosimeters, radio-chromatography instruments and software, microplate readers and a variety of radiation safety consumables. For further information please visit www.lablogic.com or call our office on 813-626-6848.

LANDAUER, RaySafe & Fluke Biomedical

2 Science Road
Glenwood, IL 60425
708-755-7000
www.landauer.com

Booth: 409

Strategically aligned as leaders in radiation measurement, management, education and safety, these providers join to offer optimal radiation products and services wherever you work – health care, industry, energy or research. Learn about expanded consulting capabilities to augment shrinking staffs and new products to save time while efficiently and effectively managing personnel and patient safety programs. Visit booth #409 to hear the many ways your organization can benefit.

Ludlum Measurements, Inc

501 Oak Street
Sweetwater, TX 79556
800-622-0825
www.ludlums.com

Booth: 505

Ludlum Measurements, Inc. has been designing, manufacturing, and supplying radiation detection and measurement equipment in response to the world's need for greater safety since 1962. Throughout its more than 5-decade history, it has developed radiation detection technologies and instruments in support of enhancing the safety of personnel and the environment.

Mirion Technologies

Booth: 102

5000 Highlands Parkway
Smyrna, GA 30082
800-243-4422
www.mirion.com

Platinum Sponsor

Mirion Technologies is a leading provider of innovative products, systems and services related to the measurement, detection and monitoring of radiation. The company delivers high quality, state of the art solutions that constantly evolve to meet the changing needs of its customers. With the addition of the Canberra brand in 2016, Mirion expanded its portfolio and the breadth of its expertise to bring a new standard of solutions to the market. Every member of the Mirion team is focused on enhancing the customer experience by delivering superior products, exceptional service and unsurpassed support. Mirion Technologies: Radiation Safety. Amplified.

NRRPT

Booth: 203

PO Box 3084
Westerly, RI 02891
401-637-4811
www.nrrpt.org

To encourage and promote the education and training of Radiation Protection Technologists and, by doing so, promote the science of Health Physics.

NUVIA Dynamics Inc.

Booth: 208

222 Snidercroft Road
Concord, ON L4K 2K1 Canada
905-760-9512
nuviatech-instruments.com

We offer standard and tailored measurement solutions to nuclear owners, operators and stakeholders for all stages of a facility's life cycle under the NUVIA Tech Instruments brand. Either components (detectors, analyzers or software) or complete systems which can incorporate carrier / conveyor equipment, GPS control and/or signal processing units are available.

NV5-Dade Moeller

Booth: 304

1835 Terminal Drive, Suite 200
Richland, WA 99354
509-946-0410
www.NV5.com

NV5-Dade Moeller, provides professional and technical services to government and commercial clients in radiological and nuclear safety, public and worker protection, and environmental project operations. We have experience in a wide range of disciplines, including health physics, industrial hygiene, occupational safety, training, environmental services, infrastructure, engineering and program management.

ORTEC

Booth: 508

801 S. Illinois Ave
Oak Ridge, TN 37830
865-483-2124
www.ortec-online.com

ORTEC has been an industry leader in the design and manufacture of ionizing radiation detectors, nuclear instrumentation, analysis software, and integrated systems for over 55 years. Our products are deployed globally for Nuclear Security, Waste Management, Health Physics, and Radiochemistry Laboratory Applications. Visit our booth today and allow us to assist you with your nuclear measurement needs.

Radiation Safety & Control Services Inc (RSCS)

Booth: 401

91 Portsmouth Ave
Stratham, NH 3885
603-778-2871
www.radsafety.com

RSCS offers expertise in all aspects of radiation safety and measurement applications. We specialize in operational and decommissioning services for nuclear, industrial, medical, and government radiological facilities. Our services include health physics consulting, technical staffing, training, instrumentation (sales, installation, calibration, and repair), emergency planning, and specialized radiological characterizations and measurements.

Spectral Labs Incorporated**Booth: 503**

15920 Bernardo Center Drive
San Diego, CA 92127
858-207-3727
spectrallabs.com

Spectral Labs Incorporated's (SLI) portfolio ranges from immersive simulation training software and apps to air particle and contraband detectors and technology interfaces. SLI's Employee Owners demonstrate a "Passion for Practical Solutions" through innovative hardware and software technologies that benefit military, responder, and law enforcement customers.

**Technical Associates/
Overhoff Technology****Booth: 200**

7051 Eton Avenue
Canoga Park, CA 91303
818-883-7043
www.tech-associates.com

Drone mounted alpha beta gamma plume detectors and search tools. Tritium monitors, Real Time Air and Water monitors. Personnel and vehicle monitors. A wide variety of quality equipment. Come to our booth. We can supply what you need for almost any requirement. Power plants to hospitals.

Tracerco Ltd**Booth: 307**

4106 New West Drive
Pasadena, TX 77507
281-291-7769
www.tracerco.com/monitors

Tracerco, part of Johnson Matthey Plc, is a world leading industrial technology company providing unique and specialized detection, diagnostic and measurement solutions. Tracerco offers an extensive range of portable radiation monitors for sale and hire, complete with in-house testing and global re-calibration services.

**Thomas Gray &
Associates, Inc.****Booth: 103**

1205 West Barkley Avenue
Orange, CA 92868
714-997-8090
www.tgainc.com

Thomas Gray and Associates, Inc. (TGA) is a licensed radioactive services company that offers a full suite of health physics consulting that includes facility decommissioning, on-site services, training, radioactive materials processing, disposal brokerage, nuclide identification, transportation, packaging, and decay-in-storage services.

**Versant Medical Physics
and Radiation Safety****Booth: 109****Silver Sponsor**

116 S. Riverview Drive
Kalamazoo, MI 49004
888-316-3644
versantphysics.com

Versant Medical Physics & Radiation Safety provides exceptional quality consulting and support services to healthcare providers, including Radiation Safety Software: Odyssey, Personnel Dosimetry Badges & Management, and Regulatory Support Services & Audits. Our mission is to produce accurate results to improve the quality of its client's, and their patient's, lives.

THURSDAY

9:00 AM – 4:00 PM Harbor's Edge Restaurant

IRPA Special Session on Radiation Safety Culture in Medicine

(co-sponsored by HPS)

Chair: Steve King

9:00 AM

Morning introduction and expected outcomes, working procedure

9:30 AM

Break-out group sessions: Establishing RP culture in medicine

- Explanation to the plenary on break out group composition and working procedures
- Three groups will identify the key elements to be considered in the process of establishing and maintaining RSCHC, and will propose a preliminary framework for the future development of the guidance document.
- Topics to be addressed:
 1. Key elements for establishing and developing a radiation safety culture in health care (RSCHC)- general approach
 2. Particular considerations for building a strong radiation safety culture in paediatric imaging
 3. How to engage patients/parents in RSCHC improvement?
 4. Strengths, weaknesses, opportunities & threats for improving RSCHC in Africa (SWOT analysis)
 5. Tools and indicators for assessing RSCHC
 - Wrap-up, preparation of the report to the plenary

10:30 AM

COFFEE BREAK

THANK YOU

**to Versant Medical Physics
and Radiation Safety
for their support of this session.**

11:00 AM

Break-out group sessions: Establishing RP culture in medicine (continued)

12:00 PM

LUNCH ON YOUR OWN

1:30 PM

Plenary Session 4: Reports from the break-out groups

One rapporteur from each group will provide feedback from the breakout sessions including a summary of discussions & conclusions, key factors and framework proposed by the group, suggestions.

- Report from groups
- Q & A + discussion

2:15 PM

Plenary Session 5: Towards the development of a guidance document

Facilitated open discussion on the framework for establishing and maintaining RSCHC. Topics for discussion:

- Key elements in the framework
- Guidance document
 - Scope, purpose, target audience
 - Content outline, structure, format, language/s
 - Related products (leaflets, implementation tools, check-lists)
- Next steps, concluding remarks

4:00 PM

Final questions and answers

AMERICAN ACADEMY OF HEALTH PHYSICS

Saturday, 16 February 2019 • Sheraton San Diego Hotel & Marina

AAHP Course #1

8:00 AM – 5:00 PM

Harmony in Concepts and Units for Internal Dose Calculations for Nuclear Medicine Applications or for Protection of Radiation Workers

Michael Stabin, PhD, CHP; RADAR, Inc.

Location: Marina 3

Internal dose calculations for nuclear medicine applications or for protection of radiation workers are based on the same fundamental concepts and units. The various systems developed to provide a basis for the needed calculations (e.g. ICRP 30/60/103, MIRD, RADAR) use equations that appear to be different, but are in fact identical when carefully studied.

The RADAR method harmonized the defining equations and units employed to provide quantitative analysis for these two general problem areas. This program will show, from a theoretical standpoint, how all of these systems are identical in concept, and will then show, using practical examples, how each is applied to solve different problems. For nuclear medicine, an overview will be given of the current state of the art and promise for future improvements to provide more patient specificity in calculations and better ability to predict biological effects from calculated doses. For occupational applications of internal dosimetry, an overview will be given of currently applicable models and methods for bioassay analysis and dose assessment, showing several practical examples.

AAHP Course #2

1:00 PM – 5:00 PM

Practical External Dosimetry Management

Tosh Ushino, CHP; MJW Corp

Location: Marina 4

This course addresses practical management of external dosimetry program. We will review the fundamentals of radiation interactions, radiation sources, and detector theory. We will discuss different types of dosimeters (passive and active), their characteristics, and how radiation interacts with them. In addition to the standard dosimeter badges for beta, gamma and x-ray radiation, the course will cover dosimeters for neutron, eye, and extremity. The course will also present multi-badging and EDE calculations.

The course will discuss potential sources of errors, dose investigations, dose assignment and documentation, how radiation dosimetry services work, and Do-It-Yourself-Quality Assurance. Example investigations are presented and discussed. If time permits, the course will also cover use of the Varskin code for calculating shallow dose from contamination.

Solving Radioactive and Mixed Waste Puzzles for Over 30 Years.

PROFESSIONAL ENRICHMENT PROGRAM (PEP)

Sunday, 4 February 2018 • Sheraton San Diego Hotel & Marina

Sunday 8:00 AM – 10:00 AM

1-A Evaluation of MARSSIM and MARSAME Surveys

David Stuenkel, Trinity Engineering Associates

Location: Marina 2

The Multi-Agency Radiation Survey and Site Investigation Manual (MARSSIM) provides guidance on how to demonstrate that a site complies with applicable radiation dose- or risk-based release criteria. In a similar way, the Multi-Agency Radiation Survey and Assessment of Materials and Equipment (MARSAME) manual, a supplement to MARSSIM, provides guidance on how to determine proper disposition of materials and equipment. While both MARSSIM and MARSAME provide comprehensive guidance, the focus of both is on the design and evaluation of final surveys, known as final status surveys in MARSSIM and disposition surveys in MARSAME. This presentation will discuss the evaluation of final status surveys and disposition surveys. This will include preliminary data review; calculations of upper confidence levels, minimum detectable concentrations, and minimum quantifiable concentrations; and the performance of statistical tests. Illustrative examples will be used to demonstrate these concepts.

1-B Harmony in Concepts and Units for Internal Dose Calculations for Nuclear Medicine Applications or for Protection of Radiation Workers

Michael Stabin, PhD, CHP; RADAR, Inc.

Location: Marina 3

Internal dose calculations for nuclear medicine applications or for protection of radiation workers are based on the same fundamental concepts and units. The various systems developed to provide a basis for the needed calculations (e.g. ICRP 30/60/103, MIRD, RADAR) use equations that appear to be different, but are in fact identical when carefully studied. The RADAR method harmonized the defining equations and units employed to provide quantitative analysis for these two general problem areas. This program will show, from a theoretical standpoint, how all of these systems are identical in concept, and will then show, using practical examples, how each is applied to solve different problems. For nuclear medicine, an overview will be given of the current state of the art and promise for future improvements to provide more patient specificity in calculations and better ability to predict biological effects from calculated doses. For occupational applications of internal dosimetry, an overview will be given

of currently applicable models and methods for bioassay analysis and dose assessment, showing several practical examples.

1-C Medical Laser Safety Program – What Health Physicists Need to Know

Deidre Elder, University of Colorado Hospital

Location: Spinnaker

Medical laser systems are used in many clinical settings, including ophthalmology and dermatology clinics, interventional radiology and cardiology and the operating room. Whether it is a small clinic or a large academic medical center, a health care facility with laser applications should have a program in place to ensure the safety of patients and personnel. Health Physicists and Medical Physicists may be asked to oversee laser safety programs at medical facilities and need the tools to run an effective program. The 2018 edition of the American National Standard for Safe Use of Lasers in Health Care (ANSI Z136.3-2018) was released in August and will be discussed along with other standards that apply to the use of medical lasers.

Sunday 10:30 AM – 12:30 PM

2-A Alpha Spectroscopy for the HP

Craig Maddigan, ORTEC

Location: Marina 2

This course offers a fast-paced review of the basic principles of alpha spectroscopic analysis for the Health Physicist. The course includes a review of the nature and origins of alpha-particle emitting radioactivity, basic physics of alpha particle interaction with matter, considerations and consequences of sample preparation for alpha spectroscopy, alpha spectroscopy system components and calibrations, and a primer on interpretation of alpha spectroscopy data.

2-B Thorium Molten Salt Reactors (TMSR): Key Radiation Protection Challenges

Casper Sun, Health Physicist

Location: Marina 3

Join this lecture for an overview of thorium molten salt reactors (TMSR) and their radiation safety requirements. In recent years, the potential of TMSR has captivated the attention of our nuclear energy industry. Key benefits include fuel flexibility—the ability to burn spent fuels, thorium, and unwanted plutonium—as well as reduced risk, both during normal reactor operations

and in case of emergency. As Richard Martine noted in MIT Technology Review (2016), “cheaper and cleaner nuclear plants could finally become a reality...the technology was invented more than 50 years ago”.

Overall, TMSR is a very promising option for nuclear energy, but there’s work to be done. We’ll review the top radiation protection considerations around TMSR today, including neutron radiation protection, fuel loading management and chemical separation, and controlling neutron flux in the core. Lastly, you’ll get a quick look at things to come: robotic radiation workers operating advanced nuclear reactors.

2-C Full Range Risk Training for Health Physicists

*Rick Whitman & Kim Kearfott; Associate Faculty
SPEA Homeland Security; Nuclear Engineering and
Radiological Sciences, University of Michigan*

Location: Spinnaker

Radiation Safety Officers often face many more challenges than just health physics. Because Health Physicists typically work alone, programs providing training need to provide students a full range of risk tools to ensure program success and safety. HPs need to develop the ability to explain complex topics across different populations from researchers to support staff, and even to the public without invoking fear including the psychology of stress management. HPs need the ability to brief both up and down the management chain on how secondary concerns, e.g., legal weaknesses and challenges, environmental requirements, changing licensing or protection requirements, labor union challenges, and other topics could prove problematic and even expensive to the larger organization. As research becomes more complex HPs often need to plan for seemingly mutually exclusive safety requirements involving one or more simultaneous hazards: radioactive material; machine generated radiation; non-ionizing radiation; chemicals; explosives; biologicals or more in addition to human and environmental concerns. This presentation will present both scenarios and recommendations to improve Health Physics training.

Sunday 2:00 PM – 4:00 PM

3-A Gamma Spectroscopy for the Health Physicist

Craig Maddigan, ORTEC

Location: Marina 2

This course offers a fast-paced review of the basic principles of gamma spectroscopic analysis for the Health Physicist. The course includes a review of the nature and origins of gamma emitting radioactivity, basic physics of gamma interaction with matter, consequences of gamma interactions on gamma spectra,

gamma spectroscopy system components and calibrations, gamma spectroscopy analysis methods, and interpretation of gamma spectroscopy data.

3-C Technical Basis and Operational Experience for Clearance of Personal Property from SLAC Accelerator Facilities

*James Liu, Ryan Ford, Jim Allan, Sayed Rokni;
Radiation Protection Department, SLAC National
Accelerator Laboratory (SLAC)*

Location: Spinnaker

At high energy particle accelerators, induced radioactivity in accelerator components or materials can occur as a direct or indirect consequence to exposure to the particle beam and/or the secondary radiation particles due to beam losses. Management of the potentially activated materials is an important part of the radiation protection program. This presentation addresses the release of the materials from radiological control (i.e., clearance of personal property) in accelerator facilities to meet the DOE Order 458.1 requirements. SLAC, a high-energy electron accelerator facility, has successfully release metals for recycle in the past few years. The SLAC material clearance program with its technical bases are consistent with the DOE Technical Standard DOE-STD-6004-2016 on “Clearance and Release of Personal Property from Accelerator Facilities”.

The technical bases that support the clearance of metals (e.g., aluminum, iron, steel, copper, and lead) associated operational experience at SLAC will be presented. The emphasis of the technical basis is placed on the volumetric radioactivity aspects, instead of surface contamination, due to potential activation at high-energy accelerator facilities and the more challenging measurement methods for volumetric radioactivity. The technical basis includes process knowledge (e.g., characteristics of induced radioactivity, proxy radionuclides versus the hard-to-measure radionuclides, and surface maximum activity), measurement protocols (including quantification of detection capability), and a release criterion based on that the release measurements are indistinguishable from background (IFB).

SLAC has developed and implemented a material management and release program for the material clearance and metal recycling. The program includes the establishment of radiation detection instrumentation and measurement methods to meet the ANSI N13.12 screening level requirements for clearance of accelerator materials. These instruments include portable instruments with sufficient detection capability for survey on material surfaces, field gamma spectrometer for confirmatory measurements, and a portal gate monitor. The discussion will also include best practices for instrument set-up, field measurements, documentation and record management, and communication with stakeholders. A summary of recycling progress, as well as lessons learned and mitigation of safety hazards, at SLAC will be provided.

CONTINUING EDUCATION LECTURES

CELs take place in the Sheraton San Diego Hotel & Marina

Monday 7:15 AM – 8:15 AM

CEL-1 The Case Against LNT

Alan Fellman, CHP; NV5

Location: Spinnaker

Radiation safety programs must establish compliance with radiation regulations which continue to be based on the linear no-threshold (LNT) hypothesis and the ALARA principle, despite overwhelming sound, peer-reviewed science that demonstrates the existence of a carcinogenic threshold and/or hormesis at low doses. LNT and ALARA insist that when we make changes that lower worker dose by as little as one μSv , we are making the workplace safer. Public health authorities and many radiation safety professionals have convinced most members of the public that when we evacuate 150,000 persons following Fukushima to keep them from receiving tens of mSv, we are improving public health despite the fact that this decision has resulted in more than 1,600 fatalities among evacuees. Yet despite compelling evidence revealing LNT to be fraudulent, the consistent response taken by regulatory agencies and scientific bodies whose recommendations are cited as the basis of regulatory actions is to deflect or rationalize away the science at best or simply pretend it doesn't exist at worst so as to maintain allegiance to a worldview of radiation safety built on ALARA and LNT. A sample of relevant findings supporting this allegation will be presented.

Monday 7:15 AM – 8:15 AM

CEL-2 Dosimetry Challenges of New Nuclear Medicine Theranostic Agents

Michael Stabin, PhD, CHP; RADAR, Inc.

Location: Marina 3

The term theranostics is defined as the integration of a diagnostic test with a specific therapeutic intervention. The diagnostic test should identify patients who will likely respond to a particular therapy, fail to respond to a given drug or eventually exhibit adverse events. The therapeutic application seeks to treat a specific disease. This session will describe the criteria for selecting good theranostic radiopharmaceuticals, and provide an overview of several useful theranostic agents in use, or under consideration for use, in nuclear medicine therapy, with a focus on the radiation dosimetry aspects.

To download a CEL talk, use this link and type in the corresponding CEL Code:

<http://burkinc.net/HPS2019MYPEP.php>

CEL1 – 1854

CEL2 – 4350

CEL3 – 8816

CEL4 – 9865

Tuesday 7:15 AM – 8:15 AM

CEL-3 Fundamentals of Environmental Health Physics

Jeffrey J. Whicker, PhD

Location: Harbor Island 3

Environmental health physics is a multi-disciplinary application of radiation protection to the public and the environment from exposures to radioactive materials released or present in the surrounding environment. It requires study of the transport, fate and effects of radioactive materials in the environment, and knowledge of how human and non-human receptors interact with the environment. The origins of environmental health physics can largely be traced to above-ground nuclear testing and the recognition that regulations were needed for public safety. Today, all key regulatory agencies (e.g., EPA, NRC, DOE) have requirements related to radiation protection of the public. Key elements for public radiation protection include 1) dose limits (public and non-human biota), 2) requirements for facility emission controls (e.g., filters, waste treatments, etc.), 3) measurements (effluent and environmental surveillance) to measure emissions and effectiveness of engineered controls, 4) requirements for radioactive wastes, 5) release limits for property leaving sites with radiological operations, 6) emergency preparedness for accidental releases, and 7) knowledge of radiation risk imposed in the context of that inherent from naturally occurring radioactive materials. In this course, we will discuss the fundamental aspects of the practice of environmental health physics including a regulatory overview, development of goals for property release (how clean is clean?), important aspects of environmental sampling programs, and general methods to calculate radiation doses to identified receptors.

Tuesday 7:15 AM – 8:15 AM

CEL-4 Personnel Contamination Monitoring the 411

Shawn W. Googins MS, CHP; Technical Services Manager, Radiation Safety & Control Services Inc.

Location: Spinnaker

This CEL will cover the basics of personnel contamination monitoring from simple frisking with GM pancake probes to sophisticated hand-foot-cuff monitors and whole body personnel contamination monitors. Learn some of methods and equipment used, the capabilities, and limitations of the equipment. Refresh your understanding of the equipment's MDAs for passive internal monitoring and more!. Practical examples and information will be presented.

JL SHEPHERD & ASSOCIATES

1010 ARROYO AVE., SAN FERNANDO, CALIFORNIA 91340-1822

818-898-2361 FAX 818-361-8095

J. L. Shepherd & Associates offers a variety of products & services.

- Products: Cs-137 & Co-60 sources, biological research, blood component, space effects testing, sterilization, & process irradiators.
- Gammacell 220 Co-60: reloads & uploads.
- Available Facilities: Gamma, beta & neutron instrument calibration & dosimeter irradiation.
- Services: Irradiator/calibrator security upgrades, service, repair, relocation & decommissioning for current & extinct manufacturers.
- Hot Cell: windows & leaded glass.
